

Guidelines for supplement publication

The BMJ Group journals are willing to consider publishing supplements to regular issues.

Supplement proposals may be made at the request of the Journal Editor, an editorial board member, a learned society or an alternative sponsoring organisation (including pharmaceutical companies, charitable foundations and the BMJ Group itself).

Supplements may consist of any of the following types:

- Conference proceedings, abstracts or satellite symposia; sponsorship is allowed
- A collection of articles on a particular theme or topic; sponsorship is allowed.

In all cases, the criteria listed below must be fulfilled. It is vital that the Journal's integrity,

independence and academic reputation are not compromised in any way. If the criteria listed

below are adhered to then the Journal's reputation should be protected.

Editorial and peer review issues

Selection

1. All manuscripts submitted for a supplement will be subjected to the usual peer review processes of the Journal. The Editor has the right of veto on any manuscript he/she considers unsuitable for publication.
2. Supplements will only be considered for publication when their content is unbiased and of educational value or constitute a professional service to clinicians.
3. Manuscripts should be original research or original reviews of or commentaries on previous studies. If work is included that has previously been published elsewhere this must be made clear and the original publication must be acknowledged. The quality and independence of the content is paramount.
4. The potential profitability of the supplement must not influence the decision process.
5. The Editor will accept or reject a supplement purely on its academic merit.
6. Journal-branded supplements that are clearly for promotional purposes will **not** be considered.
7. The Journal Editor may elect to edit the supplement him/herself or may appoint a specialist guest Editor, who may be an editorial board member.
8. The supplement Editor must declare any competing interests.
9. The supplement Editor must be involved at an early stage in the planning of the supplement or meeting and the selection of authors and/or speakers.

Production

10. Any supplement published must be made available to all regular Journal subscribers in print and/or online.
11. Manuscripts must be prepared in accordance with the Journal's instructions for contributors. The supplement should conform to the Journal's style and format and should include details of the Journal's affiliations and editorial board.

12. The Sponsor will be entitled to see proofs but cannot make any alterations save with the consent of the Editor and Publisher.
13. A publication schedule will be agreed in advance.
14. A Journal subscription order card may be bound in all additional copies supplied to the Sponsor.
15. The supplement pagination should be distinct from that of regular issues (eg, s1-s12).

Commercial issues

16. The Journal's Publisher must be involved at an early stage. He/she will consult the Editor, coordinate the reviewing process, oversee production and negotiate the financial arrangements with the Sponsor.
17. The Sponsor will be given a preliminary quotation. This will be based on the likely pagination, colour requirements, the number of additional copies required by the Sponsor and the arrangements for online publication.
18. The Editor should not become involved in any financial negotiations. All monies will be held by the Publisher, who will arrange payments as required.
19. The Journal, not the Sponsor, will be responsible for the Editor's remuneration and expenses if applicable.
20. The Publisher reserves the right to sell copies of the supplement to other organisations or individuals and to license the foreign language rights.
21. Sponsor must agree to underwrite the costs of supplying the supplement to all regular subscribers in print and/or online. There will be no upper or lower limit on the number of additional copies the Sponsor may purchase.
22. The Sponsor must underwrite the costs of posting the full text and pdfs of the supplement on the Journal's web site.
23. The Sponsor may wish to allow open access to the supplement content on the web for which an additional charge will be negotiated.

Advertising

24. There will be no display advertising in single sponsored supplements (this includes prescribing information of any product). Supplements with either no or only partial non-commercial sponsorship may seek to offset costs by the sale of display advertising space.
25. Acknowledgement of sponsorship will be confined to a line on the title page or inside front cover "publication of this supplement is made possible by an unrestricted educational grant from....."

Abstract supplements

Supplements comprising programmes and abstracts submitted to a learned society's meeting may also be accepted provided that the Editor or learned society has been closely involved in the selection of the programme, speakers and abstracts. These supplements **may** carry display advertising and have one or more sponsors.
